

10.2

7) 2 weighings. Weigh coin 1 and 2. If 1 and 2 are balanced, weigh 2 and 3. If 2 and 3 are balanced, 4 is the counterfeit. If 2 and 3 aren't balanced, then 4 is the counterfeit. If 1 and 2 aren't balanced, then weigh 1 and 3. If 1 and 3 balance, 2 is the counterfeit. If they don't balance 1 is the counterfeit.

11) 5 comparisons on $[a, b, c, d]$

Compare a to b , then c to d . ($a < b$) and ($c < d$). Now compare a to c , the smaller of the two is the smallest of the set. ($a < c$) So, compare b to c and d to determine the rest of the order.

15) procedure tournament sort (a_1, \dots, a_n)

$k := \lceil \log n \rceil$

binary tree of height k

for $i := 1$ to n

Set the value of the i th leaf to be a_i
and its label to be itself

for $i := n+1$ to 2^k

Set the value of the i th leaf to be $-\infty$
and its label to be itself

for $i := k-1$ down to 0

for each vertex v at level i

Set the value of v to the larger of
the values of its children and its label to
be the label of the child with the larger
value

for $i := 1$ to n

begin

$l_i =$ value at the root

let v be the label of the root

set the value of v to be $-\infty$

while the label at the root is still v
begin

$v := \text{parent}(v)$

set the value of v to the larger
of the values of its children and
its label to be the label of the
child with the larger value

end

end $\epsilon a_1, \dots, a_n$ is the list in nonincreasing order?

17/ a)

b) $(+ (+ x * x y) / x y)$

$(+ x / + * x y x y)$

c) $(x x y * + x y / +)$

$(x x y * x + y / +)$

d) $((x + (x * y)) + (x / y))$

$(x + (((x * y) + x) / y))$
